

Project Design Phase

Proposed Solution Template

ServiceNow-Based Employee Laptop Request Application

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Employees need a standardized way to request laptops. Manual email/verbal requests make tracking, approval, duplicate prevention and status visibility difficult for employees, managers and IT.
2	Idea / Solution description	Build a ServiceNow-Based Employee Laptop Request Application. Employees submit a Record Producer request with requester/manager details, Basic or Advance laptop type and reason. A Business Rule prevents duplicate requests within the same year. Flow Designer routes the request for manager approval, updates status and sends notifications.
3	Novelty / Uniqueness	Combines a centralized ServiceNow request form with yearly duplicate-request prevention, automated manager approval, status tracking, notifications and role/ACL-based access control in one workflow.
4	Social Impact / Customer Satisfaction	Provides a clearer and more consistent request experience, reduces manual follow-up, improves transparency and accountability, and helps employees and managers understand the request status.
5	Business Model (Revenue Model)	This is an internal enterprise workflow solution. No direct revenue model is specified in the project material. Its business value comes from reducing manual effort, improving process control and supporting efficient IT service operations.
6	Scalability of the Solution	The ServiceNow platform can support increased request volume. The solution can be extended with dashboards, reporting, asset/provisioning integration, richer notifications and additional IT service-management automation.

Date / Team ID / Maximum Marks fields removed as requested.
