

Project Design Phase

Solution Architecture

ServiceNow-Based Employee Laptop Request Application

Solution Architecture:

The solution architecture for the ServiceNow-Based Employee Laptop Request Application bridges the employee laptop-request problem with the ServiceNow technology solution. It defines the main application components, their behavior, security, workflow and data flow.

- Provide a centralized ServiceNow solution for employee laptop requests.
- Describe the structure and behavior of the request, validation, approval and notification components.
- Define the features and implementation requirements for the application.
- Provide a clear specification for managing and delivering the solution.

Solution Architecture Diagram:

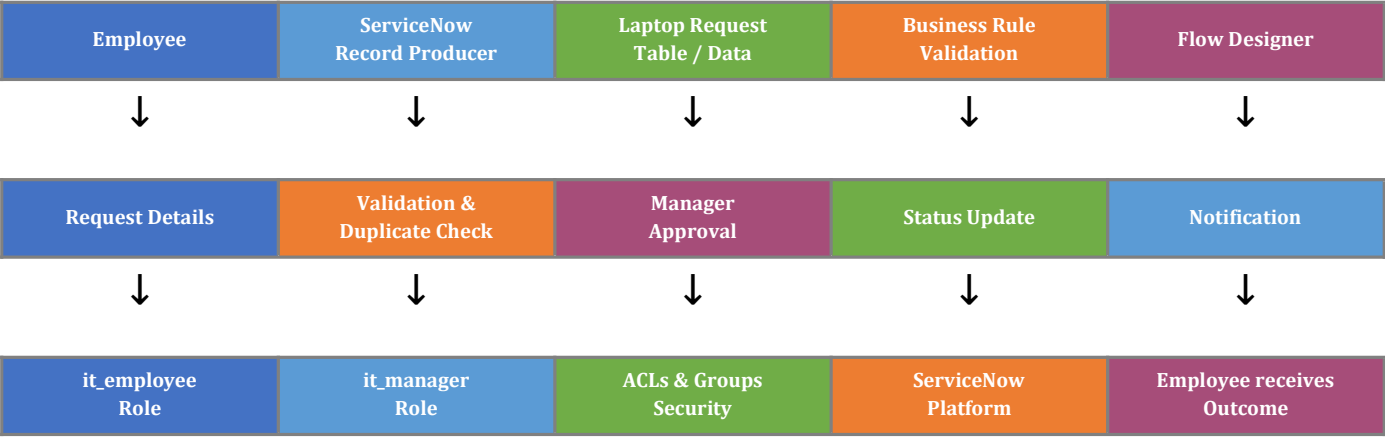

Figure 1: Architecture and data flow of the ServiceNow-Based Employee Laptop Request Application

Key components:

- **Employee interface:** Service Portal / Service Catalog Record Producer for submitting the laptop request.
- **Data layer:** Laptop Request Form table stores request information and references the requester/manager.
- **Validation:** Business Rule prevents a duplicate laptop request within the same year.
- **Workflow:** Flow Designer routes the request to the manager and handles approval/rejection and status updates.
- **Security:** IT employee and IT manager roles/groups with ACLs control access.
- **Communication:** ServiceNow notifications communicate the request outcome to the employee.

Date / Team ID / Maximum Marks fields removed as requested.
